Ultrasound Candidate Task Sheet

Case Parameters

This is a 5-minute ultrasound case. You will acquire 2 ultrasound images and interpret 2 ultrasound videos. Please know that the examiner may interrupt you to move through the case in a timely manner.

Expectations for Standardized Patient Interactions

Upon entering the room, the examiner will introduce the patient. You should interact with the standardized patient as you would any patient in a clinical situation, but please:

- Wear gloves.
- Ask the patient to expose parts of their body as needed.
- Do not wipe the gel off the patient; they will remove gel themselves.
- Ask the patient to reposition themselves to facilitate image acquisition as needed.
- Adjust the bed as needed or ask the examiner.
- Do not acquire any further history in your assessment of this patient.

Expectations for Examiner Interactions

- You must verbalize your thoughts while you are performing ultrasounds.
- Once you obtain a representative image, ask the examiner to “freeze” the screen.

Expectations for Ultrasound Machine Manipulation

- You will manipulate the ultrasound probe; the examiner will operate the machine
- Ask the examiner to adjust machine settings (depth, gain, or other modes) or transducer probe selection (linear, curvilinear, or phased array) as necessary.
- Notify your examiner if you would like to make any measurements.

Patient Information

A 64 years-old male with diabetes mellitus type 2, peripheral neuropathy and hypertension who presents with pain and swelling of leg.

Physical Exam Findings

Vital signs: T 38.2 C, HR 124, BP 156/71, RR 24, O2 saturation: 97% on room air

Physical Exam: Alert and oriented x 4, no acute distress

MSK: lower left leg with erythema in the lateral aspect. Edematous with tenderness to palpation

Task Statement

Your tasks are as follows:

- 1) Obtain a longitudinal axis clip of the soft tissue
- 2) Interpret a longitudinal axis clip of soft tissue
